

Access Assignment

Suppose that we are working on database of specific company with two tables: Products and Employees. Create this database as described in the following instructions:

Employee Table

EID	ENAME	Level
1213	Nadia	1
1214	Tala	2

Products Table

PID	Amount	Manufacture
3131	100	HP
3132	1200	Toshiba

Instructions

- Create the Employee table and the Products table as shown above
- set the field "EID" in Employee table as a primary key
- set the field "PID" in Products table as a primary key
- create a query to show the "ENames and levels" from the employee table
- create a query to show the "PID and Amounts and Manufactures" from the Products table
